

nddCargo

nddCargo 4.2.5.0 Manual do WebService de Integração - OT

Histórico de alterações

Data	Versão	Autor	Descrição
04/02/2014	1	Luis Fernando Schafaschek	Criação do documento.

Sumário

1.	Introdução	4
2.	WebService	4
2.1.	Especificação dos métodos do WebService	4
3.	Observações	6
4.	Exemplos	6
4.1.	Gerar GUID - ProcessCode 1004	7
4.2.	Envio de lote de OT - ProcessCode 1000	8
4.3.	Alterar OT - ProcessCode 1001	12
4.4.	Cancelar OT - ProcessCode 1002	16
4.5.	Integrar pagamentos realizados - ProcessCode 1003	19
4.6.	Encerrar OT - ProcessCode 1005	21
4.7.	Solicitação de pagamento imediato - ProcessCode 2005	24
4.8.	Solicitação de impressão - ProcessCode 2006	26
4.9.	Resumo de OT - ProcessCode 2008	30
4.10	Envio de consulta de dados na ANTT - ProcessCode 2013	33
4.11.	Consulta de status de viagem do Via Fácil - ProcessCode 2014	35
4.12	. Consulta de recibo de viagem do Via Fácil - ProcessCode 2015	38
4.13	. Consulta de eventos de efetivação - ProcessCode 2016	41
4.14	Confirmação de pagamentos - ProcessCode 2017	44
4.15	. Download de Operação - ProcessCode 2018	47
4.16	Consulta de saldo da contratante - ProcessCode 2023	50
4.17	. Consulta de Portador de cartão - ProcessoCode 2024	53
4.18	Reprocessar pagamento - ProcessCode 2025	55

1. Introdução

O sistema nddCargo permite que os processos com as Operações de Transporte sejam feitos através de chamadas ao Web Service do nddCargo. Dessa forma, a aplicação cliente faz a chamada ao Web Service e transmite os dados necessários para realizar o processo.

Este manual tem como objetivo detalhar o funcionamento do Web Service do nddCargo, responsável por receber e responder às solicitações dos processos das Operações de Transporte.

2. WebService

As mensagens, no WebService do nddCargo, têm um formato padrão. O WebService será único, com um subconjunto de métodos que poderão ser chamados. Cada método terá dois parâmetros e um retorno.

2.1. Especificação dos métodos do WebService

O nome do WebService do nddCargo é ExchangeMessage. Ele possui uma única operação (Send), onde sempre deverá ser enviado um CrossTalk (Header). No retorno também será retornado um CrossTalk, correspondente ao enviado.

O CrossTalk de envio contém informações que permitirão que seja feito o roteamento das mensagens e definições de parâmetros para a execução dos serviços. Já o CrossTalk de retorno conterá informações correspondentes à solicitação de envio.

2.2. Especificação da mensagem de cabeçalho no padrão CrossTalk

A mensagem CrossTalk contém 2 elementos: o cabeçalho (CrossTalk_Header) e o corpo da mensagem (CrossTalk_Body). No cabeçalho são especificados valores que identificam a mensagem (ProcessCode, MessageType, ExchangePattern, Enterprise Id) e valores de controle (DateTime, GUID, Token). No corpo pode ser especificada uma mensagem, parâmetros complementares de uma mensagem de solicitação, valores de status, etc. O corpo pode ainda estar ausente ou vazio. Esta situação ocorrerá nas mensagens onde será solicitado o resultado de um processamento.

No webservice ExchangeMessage estes dois elementos são representados por dois campos: message (header) e rawdata (mensagem, ou body).

Abaixo segue a descrição dos campos de um cabeçalho (header ou message) CrossTalk:

Campo	Descrição	Орс	Informações adicionais
ProcessCode	Código numérico determinando qual é o processo ao qual a mensagem pertence.	Ν	Tipos possíveis: 1000 = Lote OT 1001 = Alterar OT 1002 = Cancelar OT 1003 = Pagamento realizados 1004 = Gerar GUID 1005 = Encerrar OT 2005 = Pagamento imediato 2006 = Solicitação de impressão 2008 = Consultar de resumo da OT 2013 = Consultar NTT 2014 = Consultar Status viagem Via Fácil 2015 = Consultar Recibo viagem Via Fácil 2016 = Consulta de eventos de efetivação

			2017 = Confirmação de pagamentos 2018 = Donwload de operação 2023 = Consultar Saldo Contratante 2024 = Consultar Portador Cartão 2025 = Reprocessar Pagamento
MessageType	Código numérico determinando qual é o tipo de operação que se espera realizar com a mensagem.	N	Tipos possíveis: 100: Insert
ExchangePattern	Determina o padrão de comunicação que será usado.	S	Tipos possíveis: 1: A mensagem é uma requisição. O cliente inicia uma mensagem de requisição a qual o provedor responde com uma mensagem de resposta (Response), ou uma exceção. A resposta pode conter um status (RespCode), que deve ser avaliado para determinar se a troca de mensagem ocorreu como esperado. Se a resposta for uma exceção, então a troca de mensagem falhou e uma nova tentativa pode ser realizada posteriormente 7: A mensagem é uma requisição que será processada de forma assíncrona, onde a resposta será buscada posteriormente. Neste modelo ocorre uma resposta síncrona informando que a mensagem foi aceita para processamento. 8: A mensagem é uma resposta assíncrona. Deve ser usado para os casos de busca do resultado de um processamento
ResponseCode	Código de resposta do processamento, presente apenas nas mensagens de resposta.	S	Tipos possíveis: O: Default ou indeterminado 200: Processamento realizado com sucesso 202: A mensagem foi aceita e será processada. 400: A mensagem não foi entendida pelo servidor e deve ser modificada antes de ser enviada novamente. 500: Ocorreu uma exceção durante o processamento da requisição. Erro de processamento da solicitação do negócio
ResponseCodeMessage	Um texto complementar ao Response Code.	S	Exemplo: "A mensagem foi aceita e será processada."
GUID	Um Global Unique Identifier para que o consumidor possa controlar suas transações. Este mesmo GUID estará presente na mensagem de resposta e deverá ser usado para solicitar o resultado de um processamento.	S	
EnterpriseID	CNPJ da Contratante que está enviando a mensagem.	Ν	
ContentType	Especificação do tipo de dado que a mensagem está formatada.	S	Deve ser sempre "text/xml".

ContentEncoding	Especificação do encoding em que a mensagem está formatada.	S	Deve ser sempre "utf-8".
-----------------	---	---	--------------------------

Exemplo de solicitação de envio

3. Observações

- A codificação do XML Header deve ser utf-16 e do XML Body utf-8;
- Todas as chamadas, ao WebService são síncronas. Entretanto, alguns processos são assíncronos: envio de lote de Operação de Transporte, Cancelamento, Alteração e Encerramento. Ou seja, para estes processos, deve-se enviar uma mensagem solicitando o processamento e posteriormente deve-se enviar uma nova mensagem, solicitando o resultado do processamento;
- Ao fazer o envio de uma Operação de Transporte e o Web Service retornar a mensagem indicando que a solicitação foi aceita e será processada, não significa necessariamente que a Operação foi cadastrada com sucesso no sistema. Existem várias validações após a solicitação de processamento que podem impedir uma Operação de Transporte seja declarada com sucesso no nddCargo. A mensagem apenas indica que o lote foi recebido com sucesso, e que um processamento será feito.

4. Exemplos

Ao longo deste capítulo serão apresentados conceitos e exemplos de envio e retorno para cada um dos ProcessCode disponíveis. O conteúdo dos XML apresentados abaixo será apenas para efeito de exemplo, sendo que cada solicitante deverá conhecer suas regras de negócio e, consequentemente, adequar o seu processo para gerar as solicitações conforme a sua necessidade.

IMPORTANTE

Para cada um dos processos estarão disponíveis as seguintes informações:

Tipo do processamento: Síncrono ou Assíncrono. Processos síncronos indicam que o resultado do processamento será retornado na mesma chamada do envio. Processos assíncronos serão processados após o recebimento, ou seja, após o envio, sendo necessário fazer uma nova chamada solicitando o resultado do processamento. Essa segunda chamada, para consultar o resultado do processamento, deverá ter o mesmo GUID da chamada de envio.

ProcessCode: Código de processamento, que indicará qual é o tipo de mensagem que está sendo enviada.

ExchangePattern: Tipo da troca de mensagem, indicando se o resultado será buscado posteriormente ou se retornará na mesma chamada do envio. Ou seja, é a indicação, no XML, do tipo de processamento da chamada.

GUID: Identificador único do processamento

Para todos os processos, é sempre importante ter atenção em relação aos campos ProcessCode, ExchangePattern e GUID da mensagem de requisição. Eles são determinantes para o tipo de processamento que está sendo solicitado. Portanto, o conceito destes campos deve estar muito claro para quem for desenvolver as integrações via Web Service.

4.1. Gerar GUID - ProcessCode 1004

Um GUID (Globally Unique Identifier) é um tipo especial de identificador utilizado em aplicações para providenciar um número de referência que será único em qualquer contexto. Neste caso utilizamos essa definição para identificar uma transação dentro do Web Service, garantindo que as solicitações serão únicas e conhecidas apenas pelo solicitante.

Todas as integrações farão o uso do GUID, tanto para identificar o processo (nas consultas de processamento) quanto para a assinatura de mensagens. O software que fará a integração com o Web Service poderá gerar o GUID por conta própria. Ou se desejar, poderá fazer uma chamada no Web Service, utilizando o ProcessCode 1004, que retornará um GUID, que posteriormente deverá ser integrado à mensagem. Portanto, se optar por solicitar o GUID, antes do envio de qualquer integração, o software solicitante sempre deverá fazer uma chamada solicitando um novo GUID. O GUID gerado na resposta deverá ser integrado à mensagem de envio do processamento que se deseja realizar.

- Tipo do processamento = Síncrono
- ProcessCode = 1004
- MessageType = 100
- ExchangePattern = 1
- GUID = Não é enviado, porém estará no retorno

Exemplo de envio de solicitação de GUID:

```
<?xml version="1.0" encoding="UTF-8"?>
<soap:Envelope xmlns:soap="http://www.w3.org/2003/05/soap-envelope"</pre>
xmlns:tem="http://tempuri.org/">
   <soap:Header/>
   <soap:Body>
      <tem:Send>
        <!--Optional:-->
         <tem:message><![CDATA[<?xml version="1.0" encoding="utf-16"?>
<CrossTalk_Message xmlns:xsd="http://www.w3.org/2001/XMLSchema"</pre>
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns="http://www.nddigital.com.br/nddcargo">
   <CrossTalk Header>
         <ProcessCode>1004</ProcessCode>
           <MessageType>100</MessageType>
           <ExchangePattern>1</ExchangePattern>
           <DateTime>2012-05-28T11:18:04.2162347-03:00
           <EnterpriseId>12345678901234/EnterpriseId>
           <Token>123456789014257896452135</Token>
   </CrossTalk Header>
  <CrossTalk Body>
            <CrossTalk Version Body versao="4.2.0.0"/>
  </CrossTalk Body>
 </CrossTalk Message>]]></tem:message>
        <!--Optional:-->
        <tem:rawData/>
      </tem:Send>
   </soap:Body>
</soap:Envelope>
```

Exemplo de retorno de solicitação de GUID:

```
<soap:Envelope xmlns:soap="http://www.w3.org/2003/05/soap-envelope"</pre>
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns:xsd="http://www.w3.org/2001/XMLSchema">
   <soap:Bodv>
      <SendResponse xmlns="http://tempuri.org/">
         <SendResult><![CDATA[<?xml version="1.0" encoding="utf-8"?>
<CrossTalk Message xmlns:xsd="http://www.w3.org/2001/XMLSchema"</pre>
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
 <CrossTalk Header>
   <ResponseCode>0</ResponseCode>
   <ProcessCode>1004</ProcessCode>
   <MessageType>100</MessageType>
   <ExchangePattern>1</ExchangePattern>
   <SourceId>0</SourceId>
   <GUID>4b41c5bd-82fa-4e4c-9f86-a3c5bff3a927</GUID>
   <DateTime>2012-05-28T11:18:04.2162347-03:00
   <EnterpriseId>12345678901234/EnterpriseId>
   <Token>123456789014257896452135</Token>
</CrossTalk Header>
</CrossTalk Message>]]></SendResult>
      </SendResponse>
   </soap:Body>
</soap:Envelope>
```

4.2. Envio de lote de OT - ProcessCode 1000

Este é a integração onde será feito o cadastramento (envio) da Operação de Transporte, juntamente à ANTT, para que se obtenha o CIOT.

- Tipo do processamento = Assíncrono
- ProcessCode = 1000
- MessageType = 100
- ExchangePattern = 7
- GUID = Gerado pela integração apresentada no item 4.1

Exemplo de envio de Lote

```
<?xml version="1.0" encoding="UTF-8"?>
<soap:Envelope xmlns:soap="http://www.w3.org/2003/05/soap-envelope"</pre>
xmlns:tem="http://tempuri.org/">
   <soap:Header/>
   <soap:Body>
      <tem:Send>
         <!--Optional:-->
         <tem:message><![CDATA[<?xml version="1.0" encoding="utf-16"?>
<CrossTalk Message xmlns:xsd="http://www.w3.org/2001/XMLSchema"</pre>
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns="http://www.nddigital.com.br/nddcargo">
     <CrossTalk Header>
              <ProcessCode>1000</ProcessCode>
              <MessageType>100</MessageType>
              <ExchangePattern>7</ExchangePattern>
              <GUID>4b41c5bd-82fa-4e4c-9f86-a3c5bff3a927</GUID>
             <DateTime>2012-05-28T11:18:04.2162347-03:00
             <EnterpriseId>12345678901234</EnterpriseId>
             <Token>123456789014257896452135</Token>
     </CrossTalk Header>
    <CrossTalk Bodv>
              <CrossTalk_Version Body versao="4.2.0.0"/>
    </CrossTalk Body>
   </CrossTalk Message>]]></tem:message>
         <!--Optional:-->
         <tem:rawData><![CDATA[<?xml version="1.0" encoding="utf-8"?>

</loteOT envio>
]]></tem:rawData>
         </tem:Send>
     </soap:Body>
</soap:Envelope>
```

Exemplo de resposta de um envio de lote

```
<soap:Envelope xmlns:soap="http://www.w3.org/2003/05/soap-envelope"</pre>
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns:xsd="http://www.w3.org/2001/XMLSchema">
  <soap:Body>
     <SendResponse xmlns="http://tempuri.org/">
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
 <CrossTalk Header>
   <ResponseCode>202</ResponseCode>
   <ResponseCodeMessage>A mensagem foi aceita e será processada/ResponseCodeMessage>
   <ProcessCode>1000</ProcessCode>
   <MessageType>100</MessageType>
   <ExchangePattern>7</ExchangePattern>
   <SourceId>0</SourceId>
    <GUID>4b41c5bd-82fa-4e4c-9f86-a3c5bff3a927</GUID>
   <DateTime>2012-05-28T11:18:04.2162347-03:00
   <EnterpriseId>12345678901234</EnterpriseId>
   <Token>123456789014257896452135</Token>
  </CrossTalk Header>
  <CrossTalk Body />
</CrossTalk Message>]]></SendResult>
     </SendResponse>
   </soap:Body>
```

</soap:Envelope>

Esta integração é assíncrona. Como explicado anteriormente, para integrações assíncronas, após o retorno do Web Service indicar que a mensagem foi recebida e será processada, é necessário fazer um novo envio, agora para consultar o resultado do processamento.

- ProcessCode = 1000
- MessageType = 100
- ExchangePattern = 8
- GUID = O mesmo utilizado no envio do lote

Exemplo de envio de consulta de processamento de Lote

```

4.3. Alterar OT - ProcessCode 1001

Esta integração tem o propósito de retificar uma Operação de Transporte já declarada. Assim como no envio, se o sistema solicitante necessitar de um GUID, poderá fazê-lo conforme citado no item 4.1. Além disso, a integração de alteração é assíncrona, ou seja, é necessário fazer a consulta do processamento após a confirmação de recebimento com sucesso do servidor. Os campos a seguir devem ter os seguintes dados:

- Tipo do processamento = Assíncrono
- ProcessCode = 1001
- MessageType = 100
- ExchangePattern = 7
- GUID = Gerado pela integração apresentada no item 4.1

Exemplo de envio de alteração de OT

```
<GUID>48173ccc-f271-4ed0-a7ea-123ccf2147b0</GUID>
                     <DateTime>2012-05-28T11:18:04.2162347-03:00
                    <EnterpriseId>12345678901234/EnterpriseId>
                    <Token>123456789014257896452135</Token>

4.4. Cancelar OT - ProcessCode 1002

Esta integração tem como objetivo realizar o cancelamento de uma Operação de Transporte, indicando sua interrupção. Uma Operação de Transporte cancelada não estará mais disponível para uso.

- Tipo de processamento = Assíncrono
- ProcessCode = 1002
- MessageType = 100
- ExchangePattern = 7
- GUID = Gerado pela integração apresentada no item 4.1

Exemplo de envio de cancelamento de OT

```
<soap:Envelope xmlns:soap="http://www.w3.org/2003/05/soap-envelope"</pre>

4.5. Integrar pagamentos realizados - ProcessCode 1003

Esta integração retornará todos os pagamentos realizados dentro do período pesquisado, no arquivo de solicitação. Dessa forma, é possível integrar ao ERP/TMS os pagamentos que já foram realizados.

- Tipo do processamento = Síncrono
- ProcessCode = 1003
- MessageType = 100
- ExchangePattern = 1
- GUID = Gerado pela integração apresentada no item 4.1

Exemplo de envio de consulta de pagamentos realizados

4.6. Encerrar OT - ProcessCode 1005

Esta integração é utilizada para fazer o Encerramento de uma Operação de Transporte, indicando que esta foi concluída e o contrato entre as partes (Contratante e Transportador) foi finalizado.

- Tipo do processamento = Assíncrono
- ProcessCode = 1005
- MessageType = 100
- ExchangePattern = 7
- GUID = Gerado pela integração apresentada no item 4.1

Exemplo de envio de encerramento de OT

```
<MessageType>0</MessageType>
             <ExchangePattern>7</ExchangePattern>

   </soap:Body>
</soap:Envelope>
```

Esta integração é assíncrona. Como explicado anteriormente, para integrações assíncronas, após o retorno do Web Service indicar que a mensagem foi recebida e será processada, é necessário fazer um novo envio, agora para consultar o resultado do processamento.

- ProcessCode = 1005
- MessageType = 100
- ExchangePattern = 8
- GUID = O mesmo utilizado no envio do encerramento

Exemplo de envio de consulta de encerramento de OT

```

4.7. Solicitação de pagamento imediato - ProcessCode 2005

Esta integração permite que seja solicitado o pagamento imediato de uma parcela que está em aberto (não foi paga) de uma Operação de Transporte, não sendo necessário aguardar o evento indicado para ocorrência do pagamento (registro de passagem, execução automática, etc.).

Uma vez que o pagamento imediato foi processado, não é possível solicitar o estorno do pagamento. Por esse motivo, deve-se tomar cuidado ao utilizar esta integração.

- Tipo do processamento = Síncrono
- ProcessCode = 2005
- MessageType = 100
- ExchangePattern = 1
- GUID = Gerado pela integração apresentada no item 4.1

Exemplo de envio de pagamento imediato de parcela

```
<?xml version="1.0" encoding="UTF-8"?>

4.8. Solicitação de impressão - ProcessCode 2006

Esta integração permite solicitar a impressão do DOT (Documento da Operação de Transporte) sem que haja a necessidade de acessar o Portal nddCargo. Entretanto, para que este processo funcione corretamente, é necessário a instalação do módulo Remote Print na máquina onde será realizada a impressão.

Ao final do processamento desta integração, se realizada corretamente, o DOT será impresso na máquina do cliente, com a solicitação feita a partir do TMS/ERP.

- Tipo do processamento = Assíncrono
- ProcessCode = 2006
- MessageType = 100
- ExchangePattern = 7

• GUID = Gerado pela integração apresentada no item 4.1

Exemplo de envio de impressão de DOT

```

4.9. Resumo de OT - ProcessCode 2008

Esta integração permite que seja consultado o status atual de uma determinada Operação de Transporte, bem como o status das suas parcelas. A consulta pode ser feita por número e série ou pelo CIOT da Operação.

- Tipo do processamento = Síncrono
- ProcessCode = 2008;
- MessageType = 100
- ExchangePattern = 1
- GUID = Gerado pela integração apresentada no item 4.1

Exemplo de envio de resumo de OT

4.10. Envio de consulta de dados na ANTT - ProcessCode 2013

Este é a integração que pode ser utilizada para fazer a consulta de informações de transportadores e/ou veículos. Essa consulta será realizada pelo nddCargo nos Web Services da ANTT.

- Tipo do processamento = Assíncrono
- ProcessCode = 2013
- MessageType = 100
- ExchangePattern = 7
- GUID = Gerado pela integração apresentada no item 4.1

Exemplo de envio da consulta

4.11. Consulta de status de viagem do Via Fácil - ProcessCode 2014

Esta integração pode ser utilizada para fazer a consulta do status de uma viagem comprada no Via Fácil. Essa consulta será realizada pelo nddCargo nos Web Services da Via Fácil.

- Tipo do processamento = Assíncrono
- ProcessCode = 2014
- MessageType = 100
- ExchangePattern = 7
- GUID = Gerado pela integração apresentada no item 4.1

Exemplo de envio da consulta

```

4.12. Consulta de recibo de viagem do Via Fácil - ProcessCode 2015

Esta integração pode ser utilizada para fazer a consulta do recibo de uma viagem comprada no Via Fácil. Essa consulta será realizada pelo nddCargo nos Web Services da Via Fácil.

- Tipo do processamento = Assíncrono
- ProcessCode = 2015
- MessageType = 100
- ExchangePattern = 7
- GUID = Gerado pela integração apresentada no item 4.1

Exemplo de envio da consulta de recibo

```

```

Esta integração é assíncrona. Como explicado anteriormente, para integrações assíncronas, após o retorno do Web Service indicar que a mensagem foi recebida e será processada, é necessário fazer um novo envio, agora para consultar o resultado do processamento.

- ProcessCode = 2015
- MessageType = 100
- ExchangePattern = 8

• GUID = O mesmo utilizado no envio da consulta

Exemplo de envio de consulta do resultado do processamento

```

4.13. Consulta de eventos de efetivação - ProcessCode 2016

Esta integração pode ser utilizada para consultar os eventos de efetivação de pagamentos que já foram executados para as parcelas.

- Tipo do processamento = Síncrono
- ProcessCode = 2016
- MessageType = 100
- ExchangePattern = 1
- GUID = Gerado pela integração apresentada no item 4.1

Exemplo de envio de consulta de eventos de efetivação

```

4.14. Confirmação de pagamentos - ProcessCode 2017

Esta integração deve ser utilizada para fazer a confirmação de pagamentos, que dependem dessa sinalização para que ocorram.

- Tipo do processamento = Assíncrono
- ProcessCode = 2017
- MessageType = 100
- ExchangePattern = 7
- GUID = Gerado pela integração apresentada no item 4.1

Exemplo de envio de confirmação de pagamentos

```
<soap:Envelope xmlns:soap="http://www.w3.org/2003/05/soap-envelope"</pre>
xmlns:tem="http://tempuri.org/">
   <soap:Header/>

    <EnterpriseId>12345678901234</EnterpriseId>
    <Token>123456789014257896452135</Token>
  </CrossTalk Header>
  <CrossTalk_Body />
</CrossTalk_Message>]]></SendResult>
      </SendResponse>
   </soap:Body>
</soap:Envelope>
```

Esta integração é assíncrona. Como explicado anteriormente, para integrações assíncronas, após o retorno do Web Service indicar que a mensagem foi recebida e será processada, é necessário fazer um novo envio, agora para consultar o resultado do processamento.

- ProcessCode = 2017
- MessageType = 100

- ExchangePattern = 8
- GUID = O mesmo utilizado no envio da confirmação

Exemplo de envio de consulta do resultado do processamento

```
<?xml version="1.0" encoding="UTF-8"?>
<soap:Envelope xmlns:soap="http://www.w3.org/2003/05/soap-envelope"</pre>

```

Esta integração é assíncrona. Como explicado anteriormente, para integrações assíncronas, após o retorno do Web Service indicar que a mensagem foi recebida e será processada, é necessário fazer um novo envio, agora para consultar o resultado do processamento.

- ProcessCode = 2018
- MessageType = 100
- ExchangePattern = 8
- GUID = O mesmo utilizado no envio da confirmação

Exemplo de envio de consulta do resultado do processamento

```

```
</sendResponse>
</soap:Body>
</soap:Envelope>
```

Esta integração é assíncrona. Como explicado anteriormente, para integrações assíncronas, após o retorno do Web Service indicar que a mensagem foi recebida e será processada, é necessário fazer um novo envio, agora para consultar o resultado do processamento.

- ProcessCode = 2023
- MessageType = 100
- ExchangePattern = 8
- GUID = O mesmo utilizado no envio da confirmação

Exemplo de envio de consulta do resultado do processamento

```
